CTM (Color To Match) is a multi-spectral dual-pass filter solution for highly precise color reproduction in high-end digital photography.

It corresponds to the visible spectrum of the human eye in the range of 390 - 700 nanometers. The dual filter solution was developed together with the Rochester Institute of Technology (RIT) in Rochester, USA, and corrects the known color defects in the coating of the Bayer pattern overlying the CCD. CTM was developed exclusively for Sinar digital backs. This extreme color accuracy is particularly required in the digitization of valuable cultural assets, art objects, in reprographics, science and in advertising photography.

The result of these recordings are digital image data, which are unrivaled in terms of color accuracy and guarantee high throughput thanks to the efficient workflow.
