Combining advanced optical technology with thoughtful design considerations, the Rodenstock HR Digaron-S 23mm f/5.6 Aperture Body Lens delivers high-resolution imaging performance for photographers seeking precise and satisfying large format results using digital backs. While the recommended apertures of f/5.6-8 consistently create sharp, detailed images, the lens' open aperture is free from vignetting and can also be used as a working aperture. The high-resolution image quality tops out at 100 line pairs per mm with a pixel pitch of 5µm. The lens' optical design achieves symmetrical reproduction and avoids blurring and color fringing with its 2mm-thick sensor glass. The retro focus design for wide-angle lenses also eliminates any additional light fall-off and color fringing while allowing ample space for camera movements between the lens and the sensor.
