Hasselblad ND filters reduce light incidence and make it easier to control shutter speed and aperture while maintaining sharp images and accurate colors. The filters meet Hasselblad's strict optical standards and high quality requirements and fit perfectly with Hasselblad lenses. They are an essential accessory for every creative photographer.

Product information

With a lens made of Schott B 270 glass and double-sided ND coating technology, the filters are clear and have low color deviation and reflection. They can be used for long exposures during the day. When used with a telephoto lens, the filters also consistently deliver sharp, lifelike images.

The nano-coating makes the filter water- and oil-resistant, scratch-resistant and anti-static, which increases its lifespan and allows the filter to be used effortlessly even in harsh outdoor environments.

Specifications:
Aperture levels: 3
Coating: ND coating on both sides
Weight: 14g
Height: 5.5mm (when mounted on the lens, the part outside the lens is 3.0mm high)
Filter frame material: aluminum-magnesium alloy
Other features: Water and oil resistant, scratch resistant and anti-static.
Compatibility: Hasselblad XCD 3.5/45, Hasselblad XCD 2.8/65, Hasselblad XCD 3.2/90
