Product information

ATLAS, AC Eos 2.5em power distribution block - Black

Art.Nr.: AT1954PM / GTIN: 5056453550635 / manufacturer: Atlas

525,00EUR

incl. 19% VAT incl. Shipping

Delivery time: 1 - 3 working days within Germany

2 in stock

Each individual socket is housed in a highly conductive aluminium housing and optimised for low contact resistance, which ensures unhindered current transmission between the sockets.

When used in conjunction with shielded Eos dd, Eos 2.5em, Eos 4.0em or Eos Superior mains cables, significant RFI/EMI

shielding is achieved.

Rubber studs or conical spikes provide an additional layer of mechanical isolation or coupling and have an integrated wall mounting option.

An integrated direct ground path* for shielded connections and cables with our Grun Coherent Earth system further reduces the noise floor of the system and typically removes the digital ‘glare’ that is a typical symptom of RFI/EMI noise affecting the audio signal.

The Eos Modular 2.5em block works optimally as part of a complete Eos power management system where the most important cable is the one between the mains socket and the distribution block - e.g. an Eos 2.5em for the block and possibly an amplifier and Eos 2.5em or dd cable for other components.
