Macro and portrait photography are two different worlds, and yet they have one thing in common: the familiar suddenly appears in a new light. A deeper structure you've never noticed before. A trait that only becomes visible in the image. The APO-Macro-Elmarit-SL 1:2.8/100 bridges these two worlds and allows each to unfold to its fullest potential. With a minimum focusing distance of 30 cm, it brings subjects so close that the image reveals what remains hidden from the naked eye. At a

Product information

magnification ratio of 1:1, this L-mount lens captures the finest patterns, surfaces, and tiniest details in full sharpness. Apochromatic correction consistently eliminates chromatic aberrations, producing sharp contrast edges and the image quality typical of Leica. With its 100mm fixed focal length, it also enables expressive portraits from a distance—with harmonious bokeh and a clear separation between the subject and the background. This makes the APO-Macro-Elmarit-SL 1:2.8/100 a tool for images that combine technical precision and artistic expression in one. Especially in macro photography, focusing is what matters most: what becomes visible, what recedes into the background, and what the image ultimately conveys. The autofocus of the APO-Macro-Elmarit-SL works just as reliably for spontaneous portraits as it does for detailed close-ups taken handheld.

• Macro-SL prime lens
100mm f/2.8
Fast and silent autofocus with focus limiter
9 aperture blades
1:1 reproduction ratio, minimum focusing distance 30cm

• Outstanding image quality for macro and
portrait photography
Diameter 76.8mm, length 137.6mm
Weight 801g

• APO lens design
All-metal barrel with L-mount
Aqua Dura coating
Filter mount E67
